                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                      as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (bases 1 to 218073)

HARE can bind specifically to at least one of hyaluronic acid (HA, also known as hyaluronan), chondroitin (C) or chondroitin sulphate (CS). HA is an extracellular matrix component of all tissues, in particular cartilage, skin and vitreous humour. HARE is the endocytic receptor responsible for removing HA and other glycosaminoglycans from the circulation. The present sequence is the coding sequence for rat maps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (WEIG/)

                                                                                                                                                                                                                                                                                                                                   The present invention relates to sequences for rat and human HARE (Hyaluronic Acid Receptor for Endocytosis, ABA04648, ABA04652, AAM47675 and AAM47684). HARE can bind specifically to at least one of hyaluronic acid (HA, also known as hyaluronan), chondroitin (C) or chondroitin sulphate (CS). HA is an extracellular matrix component of all tissues, in particular cartilage, skin and vitreous humour. HARE is the endocytic receptor responsible for removing HA and other glycosaminoglycans from the circulation. The present sequence is the coding sequence for human table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CDS

                                                                                                                                                           the MOVI-NOVI6 proteins, and their coding sequences. The proteins have CC Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and CC cardiovascular activities. The sequences may be used in the prevention, CC diagnosis and treatment of diseases associated with inappropriate NOVX CC expression. They may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of protein by expressing inactive proteins or to CC produce NOVX proteins, by inserting the nucleic acid into a cell and CC culturing it to express the protein. The DNA may be used as DNA probes in CC assays to detect and quantitate the presence of similar DNAs in samples, CC and which patients may need restorative therapy. The NOVX protein may CC also be used as antigens in the production of antibodies (Abs) against CC NOVX and in assays to identify modulators of NOVX expression and CC activity. The anti-NOVX Abs and antagonist are used to down regulate CC expression and activity. The anti-NOVX abs are used for detecting the CC presence of NOVX is samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein NOVI, NOVS, NOVS, NOVS, NOVS, NOVS, Treated disorders (e.g. Peutz-Jeghers syndrome, cellular CC the epidermal growth factor (EGS) like super family and are involved in, CC e.g. regulation of cell development. Apontosis, cell adhesion of cell development.
